

1 Claim 1 (once amended). An inkjet recording head, comprising:  
2       a head body including:  
3               a plurality of orifices;  
4               a plurality of ink ejection units, each [an] ink ejection unit arranged so as to  
5       correspond to each of said plurality of orifices;  
6               a plurality of individual ink flow paths, each [an] individual ink flow path for  
7       supplying ink to each of said plurality of orifices; and  
8               at least one [a] common ink flow path for supplying ink to said plurality of  
9       individual ink flow [path] paths; and  
10       a metallic film at least on a part of at least one side of said head body.

1 Claim 3 (once amended). The inkjet recording head according to claim 1, wherein  
2       said plurality of orifices are formed on one side of the head body,  
3       said each ink ejection unit includes an ink heating unit,  
4       an ink supply bore hole for supplying ink to said at least one common ink flow path is  
5       bored on a side opposite to an orifice forming surface of said head body, and  
6       said metallic film is provided on the side opposite to the orifice forming surface of said  
7       head body.

1 Claim 9 (once amended). An inkjet printer using an inkjet recording head comprising:  
2       a head body including:  
3               a plurality of orifices;  
4               a plurality of ink ejection units, each [an] ink ejection unit arranged so as to  
5       correspond to each of said plurality of orifices;  
6               a plurality of individual ink flow paths, each [an] individual ink flow path for  
7       supplying ink to each of said plurality of orifices; and  
8               at least one [a] common ink flow path for supplying ink to said individual ink
